

Dr Arran Hamlet

INFECTIOUS DISEASE SURVEILLANCE LEAD

PATH

arranh92@gmail.com | github.com/arranhamlet | linkedin.com/in/arranhamlet

Summary of expertise

Infectious disease epidemiologist with over ten years in integrated disease surveillance, outbreak detection and field epidemiology. Accountable for PATH's delivery of infectious disease surveillance under STRIDES, a US Department of State-funded programme operating in 36 countries; PATH's share runs to approximately US\$19 million a year and some 40 full-time staff. Doctoral training in mathematical and statistical modelling, applied to IHR-aligned surveillance systems and to outbreak response including filoviruses and arboviruses.

Key competencies

- **Programme leadership at scale:** Full technical, financial and operational accountability for a 36-country detection programme; seven global and regional leads reporting directly; multidisciplinary teams built and supervised across 18 countries.
- **Health security and biosecurity:** IHR-aligned surveillance and notification, outbreak detection thresholds, and the technical implementation and maintenance of national surveillance systems.
- **Outbreak response:** Investigation and response operations spanning filovirus disease, diphtheria, invasive Group A *Streptococcus*, gastrointestinal illness, yellow fever and COVID-19.
- **Partnerships and advocacy:** WHO, US CDC, ministries of health, US Government donors and academic partners; briefings delivered at executive and board level.
- **Modelling and analytics:** Statistical and mathematical models for outbreak risk, spillover prediction and surveillance system evaluation, used to inform ministry and agency decisions.
- **One Health:** Human, animal and environmental health intersections in surveillance design and zoonotic risk assessment.

Professional experience

Infectious Disease Surveillance Lead

PATH

Sep 25 – now

London, United Kingdom

- Project lead for PATH's work on STRIDES (Strengthening Infectious Disease Detection Systems), a US Department of State-funded programme led by FHI 360 across 36 countries and six regions, in which PATH holds the lead for infectious disease surveillance and health information systems.
- Hold overall accountability for PATH's technical, financial and operational delivery, against an annual operating budget of approximately US\$19 million. Seven global and regional leads report to me directly, above some 40 full-time PATH staff.
- Was PATH's first full-time hire on the programme and carried it from design into implementation: set the surveillance strategy, built the government and partner relationships, wrote the workplans and recruited the team while delivering against country commitments.
- Direct PATH's surveillance and outbreak response work in the Democratic Republic of the Congo, where STRIDES is among the largest US Government mechanisms supporting the Bundibugyo virus disease response. Initiated PATH's first deployment of staff into an active outbreak: put the safety and security, legal, medical and logistical frameworks in place and secured Executive Leadership Team approval. Four staff and several consultants are now embedded in the national response in eastern DRC. Briefed the Executive Leadership Team and Board on the outbreak.

Research Fellow

IMPERIAL COLLEGE LONDON

Mar 25 – Aug 25

London, United Kingdom

- Developed mathematical models for the Jameel Institute's Realtime Intelligent Support for Emergencies initiative, assessing vaccine-preventable outbreak risk in conflict settings.

- Presented work in progress to researchers and policy makers at the WHO Global Hub for Pandemic and Epidemic Intelligence and Médecins Sans Frontières, and was invited to present results at a symposium at the 2025 American Society for Tropical Medicine and Hygiene annual meeting.

Senior Service Fellow

CENTERS FOR DISEASE CONTROL AND PREVENTION

Jul 24 – Feb 25

Seattle, WA

- Designed and carried out surveillance system evaluations for rabies, tuberculosis and long COVID prevalence, using alternative data systems to strengthen health security for Washington State's 8 million residents.
- Provided technical assistance to US states and territories using CDC forecasting and data tools; coordinated collaboration with public health agencies in Canada and the European Union.

Epidemic Intelligence Service Officer

CENTERS FOR DISEASE CONTROL AND PREVENTION

Jul 22 – Jun 24

Seattle, WA

- Led and supervised outbreak investigations, including *Corynebacterium diphtheriae*, invasive Group A *Streptococcus* and gastrointestinal illness, affecting hundreds of people among vulnerable and hard-to-reach populations. Directed a cross-sector team of 15 on the diphtheria investigation and control response.
- Designed standard operating procedures and operational frameworks for disease surveillance, integrated with state and federal health policy and systems.
- Worked with CDC, state and local public health, and international partners to strengthen surveillance for priority diseases.

Consultant and Course Designer

APPLIEDEPI

Jan 22 – now

Remote

- Design and deliver advanced training modules in data management and analytics for outbreak response, used by WHO, CDC and ministries of health. Authored chapters on data analysis and epidemiology for field manuals used by public health practitioners.

Postdoctoral Researcher

IMPERIAL COLLEGE LONDON

Jan 20 – Jun 22

London, United Kingdom

- Directed epidemiological modelling for malaria, COVID-19 and yellow fever, informing policy recommendations for ministries of health in Brazil, Nigeria and Ethiopia and for WHO, CDC and USAID.
- Designed and implemented models predicting yellow fever spillover and the potential impact of invasive malaria vectors, published in Nature Communications and BMC Medicine.
- Led development of tools for integrated vector control strategies against malaria in sub-Saharan Africa.

Epidemiologist (COVID-19 Response)

WORLD HEALTH ORGANIZATION

Jan 20 – Apr 20

Remote

- Provided analytical support for IHR-aligned surveillance during the COVID-19 pandemic in low- and middle-income countries.

Epidemiologist (Yellow Fever Response)

WORLD HEALTH ORGANIZATION

Jan 15 – Sep 15

Geneva, Switzerland

- Produced rapid epidemiological analysis and operational guidelines for outbreak response, focusing on epidemiological drivers and transmission potential in Angola and the Democratic Republic of the Congo.

Education

PhD in Infectious Disease Epidemiology

IMPERIAL COLLEGE LONDON

Jan 17 – Jan 20

London, United Kingdom

MSc in Epidemiology

IMPERIAL COLLEGE LONDON

Oct 14 – Oct 15

London, United Kingdom

BSc in Biology with Psychology

QUEEN MARY UNIVERSITY OF LONDON

Sep 11 – May 14

London, United Kingdom

Select accomplishments

- **Surveillance frameworks:** Contributed to global guidelines and standard operating procedures for yellow fever surveillance under the One Health framework.
- **Capacity building:** Designed, managed and delivered virtual and in-person training in outbreak response and data analysis for policy across low- and middle-income countries, reaching several hundred participants.

Publications and presentations

5 first-author and 47 co-authored peer-reviewed publications, on zoonotic disease surveillance, infectious disease dynamics and health security. Results of outbreak investigations, scientific analysis and data analytical approaches presented at over a dozen international conferences, meetings and workshops.

Selected first-author publications:
